

When we first plug PM66 writer into PC which was installed windows 10, it will showed an icon on taskbar

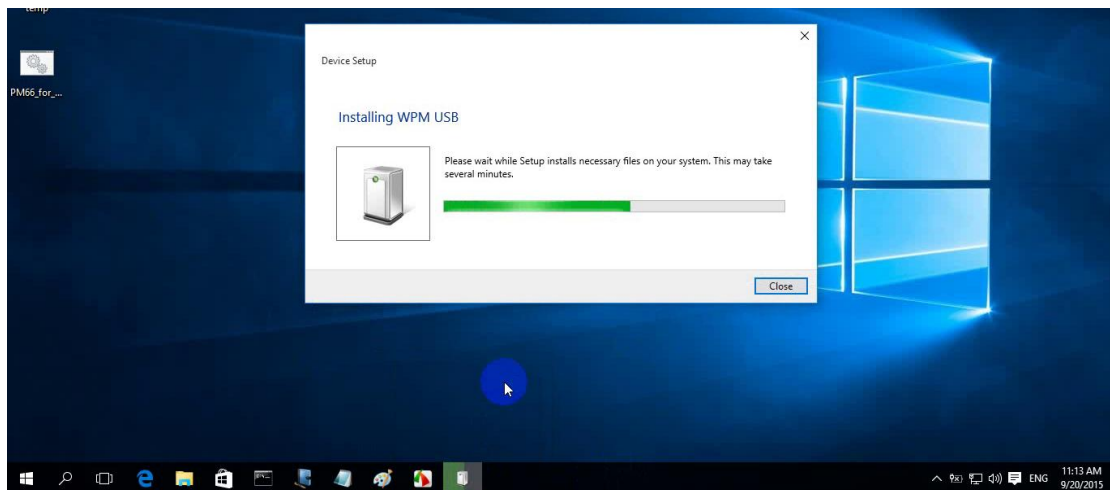

Then we press the icon on taskbar

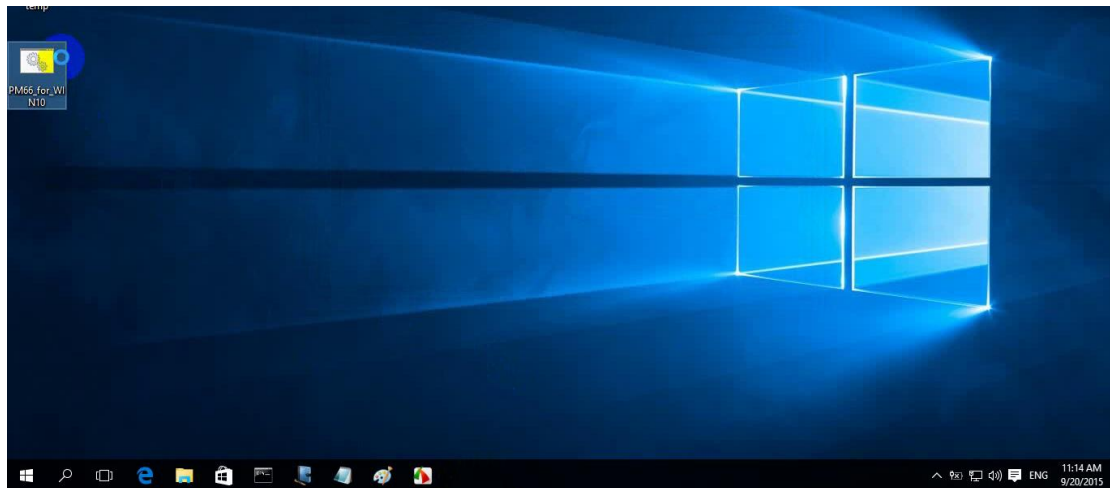

Will showed "Device Setup" dialog means PC are Installing device driver now

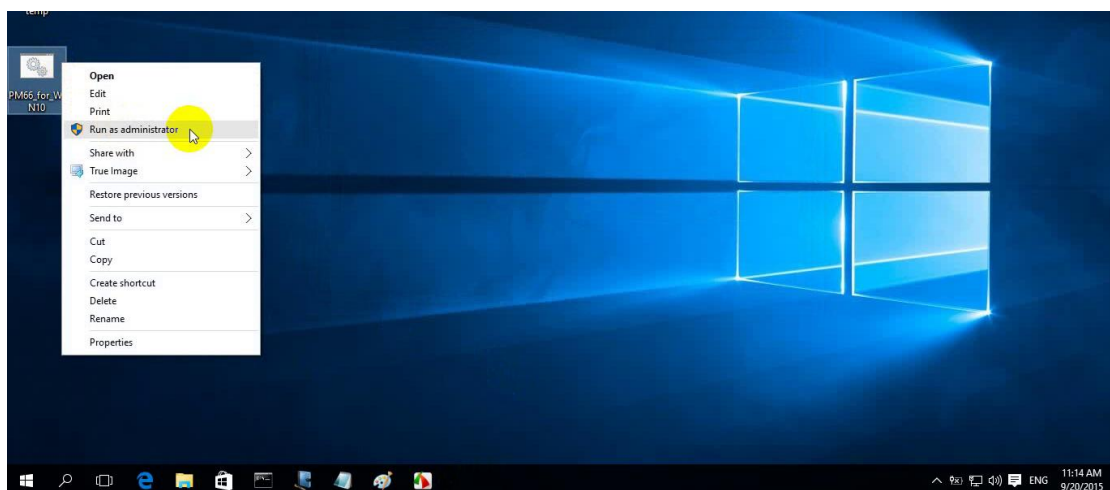

found “WPM USB” and installing device driver for it, just wait it done.

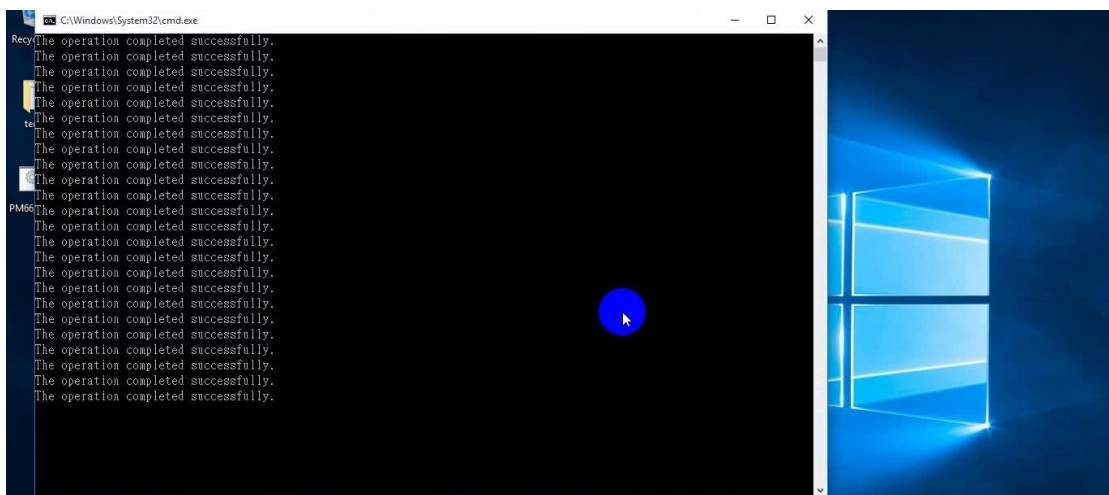

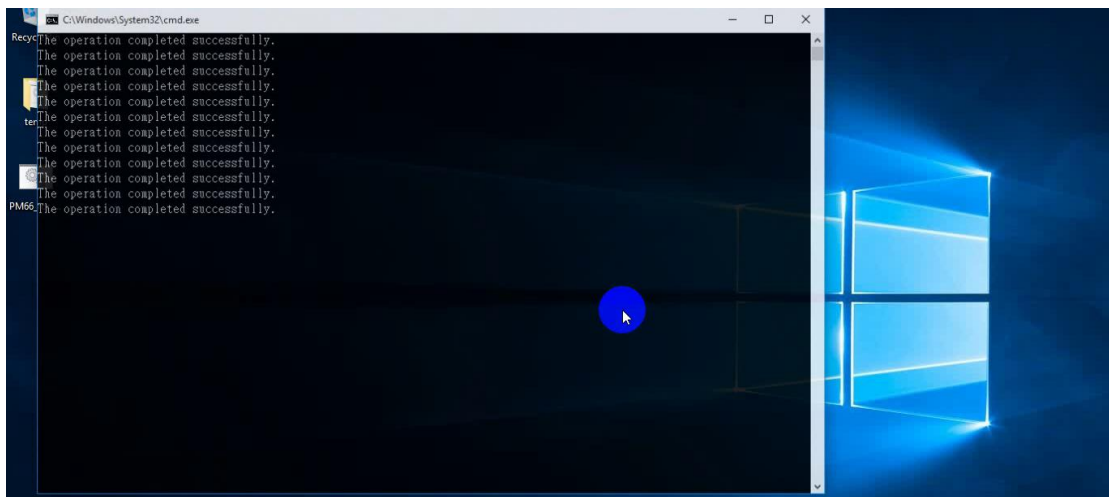

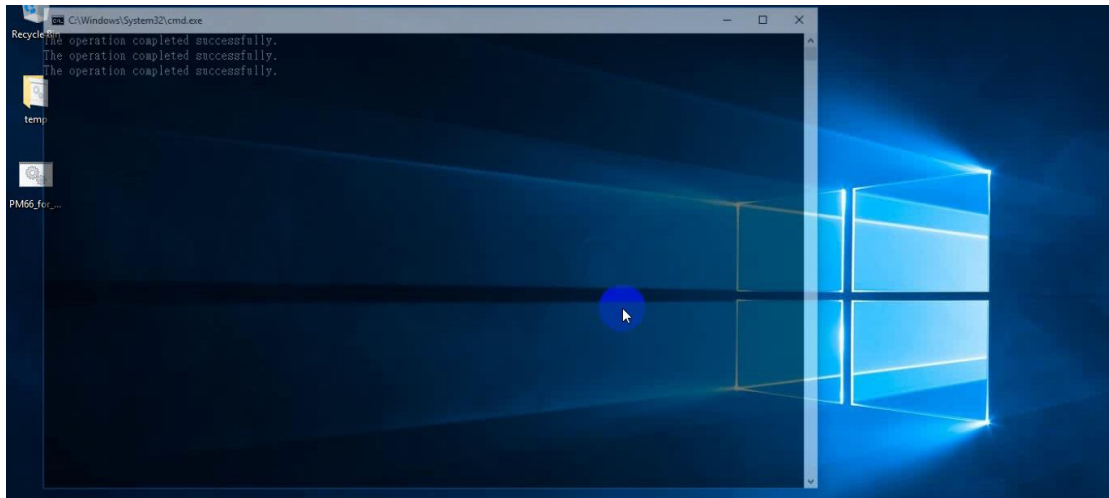

Next step is copy the PM66_for_WIN10.bat to desktop

Right click mouse button on PM66_for_WIN10.bat and select **Run as administrator** from menu

You will see a dos window opened and something execution then close up quickly like following sequence:

When it done, plug out PM66 writer wait after 3~5 seconds then plug in again, PM66 writer will work now.
